

Reversing contactor BH 9253
POWERSWITCH

- According to IEC/EN 60 947-1, IEC/EN 60 947-4-2
- Switching at zero-crossing
- To reverse 3 phase asynchronous motors up to 7.5 kW / 400 V (7.5 HP / 460 V)
- Electrical interlocking of both directions
- Temperature monitoring to protect the power semiconductors
- Measured nominal current up to 20 A
- LEDs for status indication
- Galvanic separation between control circuit and power circuit
- 45 mm; 67.5 mm; 112.5 mm width

Function

The reversing contactor BH 9253 is used to reverse the direction of 3-phase asynchronous motors by switching 2 phases. An electrical interlocking disables the control of both directions at the same time. The reversing contactor has a short on and off delay time. When reversing the phases a switchover delay is guaranteed.

Temperature sensing

To protect the power semiconductors the unit incorporates temperature monitoring. When overtemperature is detected the power semiconductors switch off and an output relay as well as a red LED is activated. This state is stored. When the temperature is back to normal the semiconductors can be activated again by switching off and on the control voltage.

Indication

- yellow LED "l": on, when left direction active
- yellow LED "r": on, when right direction active
- red LED: on, when overtemperature

Voltage range: AC: 0.8 ... 1.1 U_N
DC: 0.8 ... 1.25 U_N

Nominal consumption

at AC 230 V: 4 VA, 0.8 W
at DC 24 V: 0.3 W

Nominal frequency: 50 / 60 Hz

Switch on delay: max. 30 ms

Switch off delay: typically 25 ms

Switch-over delay t_U : 100 ms (other values on request)

Permissible residual voltage: 30 % U_N
